

EcoSmart™ Insulating Roller Shades

Today's window covering solution for Health Care Facilities

THE PROBLEM : Are your Window Coverings Dust Collectors?

Many Health Care facilities that employ state-of-the-art diagnostics and treatments continue to cover their windows with outdated blinds; one of the first things a patient sees. The aluminum mini blinds and PVC Vertical Blinds of the 1980's and 1990's are difficult to clean. They collect dust and emit Volatile Organic Compounds (VOCs), creating an unhealthy environment for both patients and employees. This is especially true for those suffering from asthma and other lung disorders.

THE SOLUTION : *EcoSmart*™ Insulating Shades

The *EcoSmart* collection includes Ultra-Fresh fabrics. These fabrics have **Anti-fungal** and **Anti-bacterial** properties that kill germs (**including MRSA**) and prevent mold and mildew. They are the perfect choice for use in hospitals and other health care facilities.

The *EcoSmart* collection also includes fabrics that have been awarded the internationally recognized **Okeo-Text 100 Standard**. The fabrics are **eco-friendly**, and are rated as a **low-allergy** fabric.
